PROFILE

Industrial Information Technology graduand with academic grounding in Financial Accounting, Management Accounting, and ERP Systems, combined with hands-on experience building and deploying multi-module internal system. During a 6-month internship at the National Science Foundation, independently designed and deployed an a mini-ERP like solution covering asset tracking, employee records, and HR reporting gaining direct insight into how enterprise systems serve real business processes. Strong communicator, disciplined and interested in building a career in SAP operations & support.

EDUCATION

BSc (Hons) Industrial Information Technology

Uva Wellassa University, Sri Lanka | 2022 – 2026

Relevant Coursework: Financial Accounting | Management Accounting | Business Management | Fundamentals of ERP

SKILLS

Business & ERP

Financial & management accounting fundamentals,
business process management,
Multi-module ERP system design,
HR, asset & inventory workflow management

Technical

Python | PHP | SQL | Excel | Power BI

Soft Skills

Communication & presentation
Documentation (reports, training materials)
Analytical thinking & attention to detail
Team leadership
Able to work independently
English (spoken & written)
Sinhala (native)

WORK EXPERIENCE

National Science Foundation, Sri Lanka | May – Nov 2025

Intern Software Engineer (mini-ERP system development)

Tech Stack: Flask / PostgreSQL / Docker / Bash / Rocky Linux

- Designed and deployed a multi-module internal system covering asset tracking, employee records, HR data, and expert pool management — functioning as an in-house ERP like solution used across departments.
- Administered a PostgreSQL database of 100+ expert records with structured filtering and reporting, used by management for resource planning and decision-making.
- Centralized HR data (skills, qualifications, biodata) from multiple departments into a single queryable system, reducing information and improving data accuracy.
- Automated monthly HR Excel reports using Python, cutting preparation time from days to under an directly supporting management reporting workflows.
- Deployed and maintained system on a Rocky Linux server

- Implemented CI/CD pipelines via GitHub Actions, ensuring reliable, consistent deployments with minimal downtime.

RELEVANT PROJECTS

Property Listings Platform — Daffodil Zone | Aug – Dec 2025

Flask · React · SQLAlchemy · PostgreSQL

Designed a normalized relational database schema and data management layer for a multi-category platform (land, hotels, agents). Focused on structured data organization, user role management, and clean data retrieval — core ERP principles applied in a business context.

Hotel Guest Management System | Sep 2025

Flask · Vite · PocketBase

Built a guest and operations management system with a structured database backend. Integrated PocketBase as a scalable data layer, reducing response delay by 40%. Demonstrates ability to manage transactional business data in real-time operational systems.

Word Classification ML Model | Apr – Oct 2024

TensorFlow · NumPy · Pandas · Python

Developed an end-to-end data pipeline — collection, cleaning, processing, model training — achieving 85% classification accuracy. Highlights strong data handling and analytical thinking applicable to ERP reporting and data quality tasks.
